

MODERNIZE YOUR DATA INFRASTRUCTURE

Architected accurately, deployed fast, managed right

With most businesses turning to the cloud, it's a matter of business survival to beat your competition's ROI, margins, speed of delivery, and productivity. And if you're not in the cloud, you're hobbled by legacy-hosted data.

Cloud has been proven to be a better platform for remote work; it's more scalable and more cost effective with a predictable OpEx rather than CapEx cost structure. It also gives you the agility to handle changes such as SQL updates. And if that's not enough, take a look at the market.

WHO ALREADY HAS THE CLOUD ADVANTAGE?

91% of IT leaders are shifting to a cloud strategy to accommodate the new normal.

80% of IT leaders have increased their overall cloud usage.

HOW MUCH ADVANTAGE ARE THEY GETTING? **LOTS.**

19.3%

FASTER GROWTH

Companies are using the cloud to grow 19.3% faster than their competitors.

20.66%

MORE SPEED

Companies in the cloud achieve a 20.66% increase in time to market.

16.18%

LOWER IT COSTS

The cloud helps reduce IT spending by an average of 16.18%

AND ON TOP OF THAT, CLOUD COMPANIES ARE HAPPIER.

Organizations that list employee satisfaction as a priority are up to **24% more likely** to expand cloud usage.

EXPLORE THE CLOUD ADVANTAGE

THE IT WORLD IS SHIFTING TO CLOUD. ARE YOU?

We can help

By modernizing your data and data estates in an Azure environment, we have found that businesses save 20% on average in app development, data management, and operational costs. But that's not all a public cloud can do. It also unlocks strategic advantages, including improved risk management, and increased scalability, functionality, and resiliency.

Your cloud opportunities

- Improve performance and functionality
- Enhance visibility, security, and reliability
- Reduce infrastructure, hardware, and maintenance costs
- Mitigate security, risk, and data protection
- Faster, less complex software updates such as SQL

CASE STUDY: MILLIN ASSOCIATES ACHIEVED 100 PERCENT UPTIME BY MOVING TO A PAAS INFRASTRUCTURE

Millin Associates is a leading provider of revenue cycle management services and software to health and human service agencies in New York, New Jersey, and Pennsylvania. Clients need to access its software anytime with no hassles, but intermittent service degradation was delivering a subpar performance instead.

Because Millin already had an on-premises Microsoft infrastructure, moving to Azure made sense—and Atmosera stood out among other vendors for its deep understanding of Millin's challenge.

Atmosera deployed an Azure cloud environment for all of Millin's software operations, with a long-term goal of moving all storage off-premises. Since the migration, Millin software is running as fast as, if not faster, than before, without the uncertainty of operational hiccups; the company is also able to scale with much greater agility.

“ Our customers operate in a high-stress environment—we need to ensure our software provides optimal performance. We've achieved 100 percent uptime with Atmosera through a PaaS infrastructure, allowing us to drive a better customer experience. We couldn't be more pleased. ”
