

Local Government Productivity

Atmosera's Azure platform experts have the tools and capabilities required to reduce complexity and increase productivity for local government entities

CASE EXAMPLE:

Atmosera currently supports a District Attorney's office local to the Pacific Northwest Region. This customer was struggling with an on-prem data storage environment that was lacking in overall efficiency and increasing in maintenance costs. This customer needed assistance identifying a refined data management environment with increased performance, elevated security, and improved cost efficiencies.

ATMOSERA SOLUTION:

Atmosera began with an initial complementary assessment to analyze each aspect of the customer's existing environment. After reviewing the results and developing a strategy, we executed a complete migration to Managed Azure. We were able to ensure the infrastructure met requirements for CJIS, IRS1075 and HIPAA. Our team effectively improved performance, security compliance and resiliency for this customer's environment.

CUSTOMER TESTIMONIAL:

"Atmosera demonstrated a very thorough understanding of our existing challenges, and provided a solution customized to our business that addressed those challenges."

- IT Management Executive

Atmosera Managed Azure Value

As an expert MSP specializing in Azure, we are able to provide the performance benefits and environment value that retail businesses require. We can provide our customers:

Reduced costs in Azure compared to an on-prem environment

Better performance with decreased TCO

Azure Optimization to maximize return on Azure investment

Azure Security Center and MDR for constant threat detection

Complete compliance in the Cloud including PCI and NIST

Azure DevOps to deliver apps at velocity using a DevOps Pipeline Platform

Experience these improved Azure performance benefits for your local government entity through a managed Azure environment with Atmosera
